

SA65 Antenna

We are pleased to announce the launch of SA65 Antenna.

SA65 is a compact GNSS antenna, perfect as a rover antenna but adequately performing for Monitoring applications and for CORS installation. It is able to track all constellations GPS, Glonass, Galileo, Beidou, QZSS, IRNSS and to receive the L-band correction.

SA65 have high phase center stability, it effectively improves measurement accuracy and provides excellent positioning solutions.

It is compatible with all GNSS geodetic receivers on the market and can be used for all static and kinematic measurement applications. The capacity to receive low elevation signals with high gain allows to provide precise and reliable position even in difficult conditions.

SA65 is light, with a weighs of only 500gr it is one of the lightest in its category, therefore it can be easily installed on a pole to be connected with an external GNSS solution such as S70G.

About Stonex

Stonex is one of the world leader company on measurement and survey, with over 100 qualified distributors worldwide.

Thanks to the integration of different positioning technologies and software the wide range of solutions allows to meet the needs of many fields of application and industries, such as: building and construction, land survey and cadastral survey, GIS data collection, 3D Scanning (architecture, archeology, industrial measurements, volume calculations), agriculture and smart farming, land and structure monitoring.

Each geospatial requirement can then be addressed and solved with a Stonex solution.

Joined together with an unbeatable professional expertise Stonex offers a wide range of top quality services, to satisfy all pre-sales and post-sales needs.

Stonex is a part of Beijing UniStrong Science & Technology Co. Ltd, global provider of GNSS, positioning and timing technology for the geospatial market.
